

Sayana Press Study

Interested in being involved in a research study, giving yourself your contraceptive injection instead of coming in to clinic?

Sayana Press is a Long-Acting Reversible Contraceptive (LARC) injection that gives you 13 weeks of effective contraception.

Who can be included?

- Are you a women aged 18-45?
- Do you think you would be able to self-administer an injection?
- Are you planning on staying in the area for the next 12 months?
- Are you willing to be contacted by clinic staff by telephone at 3, 6 & 9 months?
- Are you willing to return at 12 months for your final visit?

What the study involves;

To be involved in the study, you would need to come to The May Logan Centre to speak to one of our nurses who will make an appointment for you to see a Doctor to be consented for the study. You would then have a telephone consultation at 3, 6 & 9 months. You would need to return to clinic for a final visit at 12 months where you would also get any further supplies of your contraceptive injection should you wish to continue with it.
